Mandarins

Grapefruits

CONCLUSION
I - General Overview

Over the last few years, the Russian economy grew at an average rate of 1.3%\(^1\) and with a GDP hovering at around US$ 2.5 trillion in 2013 distributed across the Services sectors (58.3%), Industry (37.5%) and Agriculture (4.2%). The Agriculture, Industry, and Services sectors employ around 9.7%, 27.8%, and 62.5% of the labor force respectively. Russia is one of the world’s leading importers of food, partly because of its arid climate and inconsistent rainfall, suboptimal investments in the sector which led to some inefficiencies in food production and running down of livestock numbers.\(^2\)

STATISTICS

In Russia, 10.6% of the average food basket goes to fresh fruits and vegetables. The average household’s weekly spending for food products ranges from 3,632 rubles ($114.29) in Moscow to 2,809 ($89.27) rubles in a city less than 500,000 citizens, according to the RBK Department of Consulting research.\(^3\)

Russia is highly dependent on imported fruits which make up almost 50% of Russian fruit sales. Most imported fruits are available during the first six months of the year and consumption peaks from October to May. Imports are lowest in the summer (July-September) when the market is full of cheap local fruits from Russia, Moldova, Ukraine and the Central Asia republics, as well as the Middle East.

In 2013, Russia bought around €1 076 million worth of fresh and processed fruit and €769 million worth of fresh and processed vegetables. The fast growing sales to Russia include tomatoes (from €6 million in 1999 to €116.5 million in 2011), potatoes (from €7 million in 1999 to €198.5 million in 2011), apples (from €53 million to €284 million), and pears (from €19 million to €169 million), among others.\(^4\)

The largest Russian Fruits Suppliers are: Ecuador (bananas), Poland (apples), Turkey (citrus, grapes, and stone fruits), China (apples, citrus, stone fruits), Argentina (apples, pears, and citrus), and Chile (grapes).

In general, imported fruit is expensive in Russian retail outlets. Importers typically mark up by around 5%, while the supermarket mark-up varies from 10-30% and specialized fruit stalls mark-up much as 100% depending on the fruit variety.

In terms of vegetables, tomatoes are the largest imported items, followed by Potatoes and then Onions and Garlic.\(^5\)

RULES AND REGULATIONS FOR IMPORT

In order to ship fresh produces to Russia an exporter should be included in the list of exporters approved by Federal Service for Veterinary and Phytosanitary Control of Russia. The scheme of import and payment is sophisticated and requires utilization of indicative import price imposed by the Customs Office in Russia as well as a long chain of tax avoidance mechanisms. Exporters that do not comply with these formal and informal rules simply cannot deliver produce to Russia.

- Import duty on fruit is 10% and VAT 18%.
- Import duty on vegetables is 15% and VAT is 10%.
- Some countries enjoy "Most Favored Nation" (MFN) status, including South Africa, Argentina, Morocco, Poland, Spain, Chile, the Netherlands, France and Egypt. This status gives a 25% reduction in import tariff for certain fruits during periods when imports do not compete with local production.
- There is a range of fruit and vegetables (including apples, citrus, fruit, tomatoes, cucumbers, etc.) where import duty is calculated on the basis of weight.

**APPLES**

**FACTS & FIGURES**
- Apples are the most popular fruits in Russia. Apples alone capture 20% of the fruit market. In 2012, apple consumption increased by 25% from 2011 and reached 13.6 kg per person.8
- Russia is the largest importer of apples in the world.
- Most demanded apple size is 80-100 mm.
- Type of preferred apples: Ganny Smith, Golden Delicious, Red Delicious, Jona Gold, and Jona Red.
- Import volumes reached 1.2 Million Tons in 2013.
- Imports of apples have been going up at a sustained CAGR of 8.7% and are expected to reach a value of 2 Million Tons by 2017. The trend is expected to continue because of the further decline of import tariffs and expected crop in Poland.9
- In 2012 the major suppliers of apples to Russia were: Poland (57%), Moldova (12%), China (9%), and Azerbaijan (4%).

**BANANAS**

**FACTS & FIGURES**

- Average monthly consumption of bananas in Russia reached 110,000 Tons in 2011, a 22% increase from 2010 levels and a record volume reached in more than a decade.
- Imports of Bananas have been growing at a sustained rate to reach a value of 1.26 million Tons in 2012.
- The main supplier of bananas to Russia is Ecuador. The last 2 years have seen an increase in the share of imported fruits from Costa Rica and the Philippine.¹³
- Ecuadorian bananas make up 90% of the Russian market.¹⁴

GRAPES

FACTS & FIGURES

- In 2012 grape per capita consumption in Russia reached 3.5 kg, up from 3.1 kg in 2011. Grapes are available all year round in Russia.
- Peak consumption months are August-November (66 % of annual sales).\(^\text{15}\)
- Russia’s production of table grapes stood at 51,070 MT in 2012 and expected to reach 56,760 MT in 2013.\(^\text{16}\)
- Russia remains one of the top importers of grapes in the world.
- In 2012, Russia imported 388,274 T of grapes, 1.2% less than 2011 and 4.8% less than 2010.
- Prices for table grapes as of October 2013 varied between 1.4 and 1.7 US$/kg.

\(^\text{15}\) “End Market Study for Fresh and Dried Fruits in Russia”, USAID, September 2011

\(^\text{16}\) Index Mundi
Potatoes are a staple food for Russians, often referred to as their second bread. The food security for millions of rural families strongly depends on this crop. However, total consumption of potatoes has been decreasing in Russia for the past two decades, due to lower food use and decreasing industrial consumption.

Russian consume on average about 67.5 kg of potatoes per person per year. Total annual potato production in Russia totals about 29.5 million Metric Tons in 2012.

The Russian Food Security Doctrine has set a target of 95% self-sufficiency in potato production in Russia.

In 2012, Russia imported 452,748 MT of potatoes including 22,095 MT of seed potatoes and 340,652 MT of table potatoes.

Import of seed potatoes is duty free, however import of all other potatoes are subject to 13.3% import duty.

Varieties/hybrids of planting seeds shall be registered in the Russian Register of Planting Seeds after tests in the specialized experimental stations on the territory of the Russian Federation.

After a potato variety is registered in Russia, imported potatoes shall meet all Russian phytosanitary requirements.

Russian requirements for imports of commodities of plant origin are stipulated in the Order of the Ministry of Agriculture #456: “On the approval of quarantine requirements for imports of quarantine products to the territory of the Russian Federation, their storage, transportation, processing and use”, issued December 29, 2010.

Russia placed a temporary ban on the import of seed and ware potatoes from the EU, citing phytosanitary reasons.

Russia’s veterinary and phytosanitary service said numerous controls on potatoes originating from Belgium, The Czech Republic, Finland, France, Germany, Holland, Lithuania, Spain and the UK have shown the presence of micro-organisms that need to be quarantined.

As of June 2014, the price of 1kg of potatoes stood at $0.92.

Potato Exports to Russia were strongly influenced by the seed potato ban, thus potato sales plummeted from €228 million in 2011 to €40 million in 2013 (from 605 000T to 94 000T).

Citrus is the second most popular fruit after apple, especially in the winter period when mandarins and oranges are traditionally perceived as one of the symbols of New Year celebrations and other winter festivals.

Russia doesn’t grow citrus and therefore is entirely dependent on imports for consumption of oranges, grapefruits, mandarins, lemons, and limes.

Russia is the largest importer of citrus fruits in the world and demand is still growing. Imports reached almost 4 million tons in 2010.

In 2010, in terms of volume, tangerines were the most imported products in citrus segment, with a market share of 45% (Followed by oranges 33% lemons and limes 14% and grapefruit 8%).

EU and Middle East countries are the main citrus suppliers to European Russia; Turkey, Morocco, Egypt and South America dominate the citrus export to Western Russia.

A 269% rise in Egyptian shipments to 111,865 tons (T) makes the Middle Eastern country now the largest citrus supplier to Russia, followed by South Africa (45,284MT).

Finally, it is clear that the Russian market for fruits and vegetables is an attractive one for Lebanese exports. The demand for imports of fresh fruits and vegetables is high and the prices are moderate. Also we can make advantage of the months of low production in Russia where they depend more strongly on imports. However in order for this to be done, certain regulations set by the Russian Federation for trade should be followed including hygienic safety and inspection of products, packaging, importers status and other factors.
