GENERAL OVERVIEW

Over the last few years, The Malaysian economy has been growing at an average rate of 4.7%. With its GDP totaling around US$ 525 billion in 2013 distributed across the Services sector (48.1%), Industry (40.6%) and Agriculture (11.2%). The Agriculture, Industry, and Services sectors employ around 11.1%, 36% and 53.5% of labor force respectively. Malaysia’s top three imports are electrical & electronic products (27% of total imports), petroleum products (10.9%) and chemical & chemical products (8.5%).

STATISTICS

Per capita consumption in Malaysia has increased for fruits from 80.4kg in 2006 to 93kg in 2010 (Ministry of Agriculture, Malaysia, 2012). Meanwhile, for vegetables commodities, per capita consumption has slightly declined from 58kg in 2006 to 54.7 in 2010. Both Imports and exports in Malaysia have been increasing over the years. Over the past four years, the average growth rate of exports was 7.0% while the rate of imports was 10.72%. If Malaysia stays on this trend, imports will eventually outweigh exports, making the country a net importer of products.

Exports of fruits increased by 0.4% in 2013 and reached 223$ billion. On the other hand, imports increased by 7% and recorded a value of 201$ billion.

Malaysia’s Agricultural Land is 20% of the total area. Industrial crops (Oil Palm, rubber, cocoa, tobacco and pepper) occupy 77% of the total agricultural land while 16% accounts for other crops (paddy, fruits, vegetables & coconut). The Climate of Malaysia produces the proper conditions for production of exotic produce. The area is rarely affected by hurricanes or drought. The weather stays hot and humid all year long.

Imports of vegetable products increased by 6.4% in 2013 reaching approximately 825.052$ million. Over the past four years, the average growth rate of vegetables was around 12.6%.

---

1 World Bank national accounts data, and OECD National Accounts data files
2 Central Intelligence Agency, The World Factbook
3 Federal Agriculture Marketing Authority of Malaysia
The estimated value of imports for fruit products in 2013 increased by 21.4% from the previous year and was recorded at approximately $503.409 million. Over the past four years, the average growth rate of fruits was approximately 18.9%.

During 2013, the value of vegetable imports recorded approximately $825 million dollars and fruit imports $503 million dollars. Vegetables had the higher import share in the market controlling 62% while fruits controlled 38%.

Duty rates in Malaysia vary from 0% to 50%, with an average duty rate of 5.74%. Some goods are not subject to duty (e.g. laptops, electric guitars and other electronic products).

SALES TAX

The standard VAT is levied at 10% of the sum of the CIF value, duty and any excise applicable. A reduced rate between 0% and 5% applies to some products. Sales Tax may sometimes be specific, i.e. applicable on units per liter and per kg.

4 Federal Service for Veterinary and Phytosanitary Surveillance
MINIMUM THRESHOLDS

Imports with a shipment value, i.e. CIF value, up to MY$ 500 are exempt of duty, with the exception of alcohol, wine and tobacco products from USA. There is no minimum threshold for sales tax and excise.

OTHER TAXES AND CUSTOM FEES

Excise rates vary and are applicable either ad valorem or specific, i.e. on units (MY$) per liter, per liter of alcohol (LAL), per kg, per Sticks (ST- for cigarettes).

Below is an indication of the excise rates as they are applied:

- 10% to 105.0%
- $0.1 PER L to $34 PER L
- $22.5 PER LAL to $42.5 PER LAL
- $0.22 PER ST
- $7.5 PER KG to $220 PER KG

Due to the complexity of sanitary and health regulations, exporters are urged to confer with their Malaysian customers regarding the specific information needed for the importation of plants. An import license is required for plants.

Price of mandarin imports increased by 156% between 2009 and 2013
The average growth rate of the price of imports over the past 5 years was 30.3%
CONCLUSION

Finally, statistics show that Malaysia’s import of fruits and vegetables is decreasing with time while its local production of fruits and vegetables increasing. The climate of Malaysia produces the proper conditions for production of exotic produce. It is located on a peninsula in Southeast Asia. Malaysia maintains a humidity level around ninety percent because of its location close to the equator. The weather stays hot and humid all year round.

In the last five years Malaysia showed a positive trade balance. Their exports exceeded their imports thus increasing the price of imports. This increase encouraged local production. Indeed, the price of importing fruits and vegetables to Malaysia has shown a significant increase in the last few years. There are four seasonal monsoons based on some uniform-periodic changes in the wind flow patterns: the southwest monsoon, northeast monsoon and two shorter periods of inter-monsoon seasons. The southwest monsoon season is usually established in the second half of May or early June and ends in September and is a drier period for most of the states in Malaysia.

Malaysia’s agriculture sector is not an attractive one for Lebanese exporters. Many of their imports are originated from China due to their cheapness and facilities to attain. However, during their dry period, Malaysia’s imports of fruits and vegetables are at its highest. Therefore, Lebanese exporters might benefit from this period by offering specific fruits and vegetables at a reasonable cost.
